

# Hamilton Beach 70730 Motor Replacement

This is a guide to replace the motor of your Hamilton Beach product.

Written By: Mack Bernard

## INTRODUCTION

The motor is what runs the drive shaft. Without the motor, the drive shaft would not operate, as well as the blade. Replacing the Motor requires a some patience and time.

---

### TOOLS:

- [64 Bit Driver Kit](#) (1)
  - [Metal Spudger](#) (1)
-

## Step 1 — Bowl

- Remove the cover by turning it in the counterclockwise direction.

## Step 2

- Remove the bowl scraping mechanism by simply grabbing the middle section and lifting.

### Step 3

- Remove the blade mechanism by lifting it off of the blade shaft.

### Step 4

- Place hands on bowl and turn it gently, but firmly, counter-clockwise.

## Step 5

- ❗ Make sure there is no food or grime along the outside sides of the bowl or the base.

## Step 6 — Switch

- Bring the device to its upright position.

## Step 7

- Using a metal spudger, pry the switch from the front of the device.

## Step 8 — Drive Shaft

- Using the metal spudger, remove the four adhesive plastic covers that hide the screws.
- ⓘ These covers are adhered to the screws.

## Step 9

- Remove any access glue that is adhered to the screws with the precision tweezers.

## Step 10

- Using a JIS #1 driver, remove the four 10 mm screws.

## Step 11

- Lift the drive shaft.

## Step 12 — Motor

- Reach in and remove the set of 3 gears.

## Step 13

- Remove the four 8 mm JIS #1 screws that are revealed after removing the set of gears.

⚠ There will be lubricant on the screws.

## Step 14

- Flip your device over so the bottom is visible.

## Step 15

- Using a JIS #1 screwdriver, remove each of the four suction cups that are attached to the bottom of the device.

## Step 16

- Using a JIS #1 screwdriver, remove the four 12 mm screws on the bottom.
- ⓘ The screws are recessed about 3 mm inside of the device and may not be very visible.

## Step 17

- Unscrew the two 4 mm screws underneath the on/off switch with a JIS #1 screwdriver.

## Step 18

- Remove the bottom of the food processor by gently but firmly pulling it away from the silver section.

## Step 19

- Using a JIS # 1 screwdriver, remove the three screws on the white plastic piece inside the device, on the side.

## Step 20

- Remove the white piece, carefully sliding wires on the sides through the small gaps.
- ⚠ Be careful not to dislodge the spring on the cylindrical white piece next to it.

## Step 21

- The motor can now be removed from the inside of the food processor.

To reassemble your device, follow these instructions in reverse order.
